State of the Union Thoughts

The team at OnGreen is happy to see the progress being made at the Federal level in the area of clean energy. This week the White House won a key endorsement for its proposal to boost U.S. electricity generation by clean energy sources, as the head of the

Senate's energy panel said he could back the idea of including nuclear power in the fuel mix. In addition, in his State of the Union speech, President Barack Obama proposed the United States produce 80 percent of its electricity from clean energy sources, such as wind, solar, "clean" coal and nuclear, by 2035.

At OnGreen we're confident that clean energy targets can be spurred through the advancement of budding technologies such as [new battery storage startups](#) and [solar development deals](#) which already existing on our site.

Lastly, stay tuned for upcoming cleantech events organized in conjunction with government organizations in Washington D.C. next month as well as near our headquarters here in Los Angeles!

If you're not already "[On](#)", come join us!

Best Regards,
Nikhil R. Jain
CEO/Founder
